

DE GRUYTER

## OPEN CHEMISTRY

EFFECTIVE JANUARY 2018

### Article Processing Charges

In order to sustain the production of our fully-refereed open access journal, each article accepted for publication in *Open Chemistry* is subject to an Article Processing Charge of € 1200 (plus VAT, if applicable, plus money transfer charges). This fee is used to cover the costs of the peer-review process, professional typesetting and copyediting, as well as online hosting, long-term preservation, distribution to libraries and content aggregators worldwide, and extensive promotion to potential readers.

Editors and reviewers are not involved in author payment process and do not discuss charges with authors. The ability to pay does not influence whether or not a manuscript is accepted for publication.

Information regarding payment of these charges will be provided following acceptance for publication. Inquiries concerning Article Processing Charges should be addressed to the Editorial Office.

There are no submission charges.

### Waiver Policies

If the submitting author is affiliated with an organization which is listed as an Institutional Member, this membership offers a discount on the Article Processing Charge and the author has a reduced expense. However, other authors who do not fulfil these criteria can also request a discount during the submission process.

All inquiries concerning Article Processing Charges should be addressed **before or immediately after submission of a paper** to the Editor at the email address: [openchemistry@degruyter.com](mailto:openchemistry@degruyter.com)

### Funding Opportunities

Authors who are looking for funds to support the payment of Article Processing Charges have a number of options to consider. For details visit our website.
