Publication Ethics and Publication Malpractice Statement

For all parties involved in the act of publishing (the author, the journal editor(s), the peer reviewer and the publisher) it is necessary to agree upon standards of expected ethical behavior. The ethics statements for our journal are based on the Committee on Publication Ethics (COPE®) Best Practice Guidelines for Journal Editors.

Duties of the Editors-in-Chief

Fair play
Submitted manuscripts are evaluated for their intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

Confidentiality
The Editor-in-Chief and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

Disclosure and conflicts of interest
Unpublished materials disclosed in a submitted manuscript must not be used in an Editor's own research without the explicit written consent of the author(s).

Publication decisions
The handling Editor-in-Chief of the journal is responsible for deciding which of the submitted articles should be published. The Editor-in-Chief may be guided by the policies of the journal's Editorial Board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The Editor-in-Chief may confer with other editors or reviewers in making this decision.

Duties of peer reviewers

Contribution to editorial decisions
Peer review assists the Editor-in-Chief in making editorial decisions and, through the editorial communication with the author, may also assist the author in improving the manuscript.

Promptness
Any invited referee who feels unqualified to review the research reported in a manuscript or knows that its timely review will be impossible should immediately notify the Editor-in-Chief so that alternative reviewers can be contacted.

Confidentiality
Any manuscripts received for review must be treated as confidential documents. They must not be shown to or discussed with others except if authorized by the Editor-in-Chief.

Standards of objectivity
Reviews should be conducted objectively. Personal criticism of the author is unacceptable. Referees should express their views clearly with appropriate supporting arguments.

Acknowledgement of sources
Reviewers should identify relevant published work that has not been cited by the authors. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by the relevant citation. A reviewer should also call to the Editor's attention any substantial similarity or overlap between the manuscript under consideration and any other published data of which they have personal knowledge.

Disclosure and conflict of interest
Privileged information or ideas obtained through peer review must be kept confidential and not used for personal advantage. Reviewers should not consider evaluating manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions connected to the submission.

Duties of authors

Reporting standards
Authors reporting results of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the manuscript. A paper
should contain sufficient detail and references to
permit others to replicate the work. Fraudulent or
knowingly inaccurate statements constitute
unethical behavior and are unacceptable.

**Originality and Plagiarism**
The authors should ensure that they have written
entirely original works, and if the authors have
used the work and/or words of others that this has
been appropriately cited or quoted. The publisher
provides an automated scan for plagiarism when a
manuscript is submitted online. The Editors of the
journal reserve their right to immediately reject
manuscripts without peer-review in obvious cases
of intended plagiarism. Concomitantly they may
also impose a ban on authors prohibiting further
submission of manuscripts for a period of two
years.

**Multiple, redundant or concurrent
publication**
An author should not in general publish
manuscripts describing essentially the same
research in more than one journal or primary
publication. Parallel submission of the same
manuscript to more than one journal constitutes
unethical publishing behavior and is unacceptable.

**Acknowledgement of sources**
Proper acknowledgment of the work of others
must always be given. Authors should also cite
publications that have been influential in
determining the nature of the reported work.

**Authorship of a manuscript**
Authorship should be limited to those who have
made a significant contribution to the conception,
design, execution, or interpretation of the reported
study. All those who have made significant
contributions should be listed as co-authors. Where
there are others who have participated in certain
substantive aspects of the research project, they
should be named in an Acknowledgement section.
The corresponding author should ensure that all
appropriate co-authors (according to the above
definition) and no inappropriate co-authors are
included in the author list of the manuscript, and
that all co-authors have seen and approved the
final version of the paper and have agreed to its
submission for publication. All co-authors must be
clearly indicated as of the moment of manuscript
submission. Adding co-authors at a later stage will
not be accepted.

**Hazards and human or animal subjects**
If the work involves chemicals, procedures or
equipment that have any unusual hazards inherent
in their use, the authors must clearly identify these
in the manuscript.

**Ethical conduct of research**
Work involving humans should comply with the
principles laid down in the Declaration of Helsinki,
as revised in 2013. In the Materials and Methods
section, or in a separate section, the manuscript
should contain a statement that the study has been
approved by the Ethical Committee of the
institution where the study was performed, and that
the study subjects, or their legal guardians, gave
informed consent for participation in the study**.
When reporting experiments on animals, authors
should indicate whether institutional and national
standards for the care and use of laboratory
animals were followed***.

**Disclosure and conflicts of interest**
All authors should disclose in their manuscript any
financial or other substantive conflict of interest
that might be construed to influence the results or
their interpretation in the manuscript. All sources
of financial support for the project should be
disclosed.

**Fundamental errors in published works**
When an author discovers a significant error or
inaccuracy in his/her own published work, it is the
author’s obligation to promptly notify the journal’s
Editor-in-Chief or publisher and cooperate with
them to either retract the paper or to publish an
appropriate erratum.

**Publisher’s confirmation**
The Publisher and the Journal do not discriminate
on the basis of age, color, religion, creed,
disability, marital status, veteran status, national
origin, race, gender, genetic predisposition or
carrier status, or sexual orientation in its publishing
programs, services and activities.

In cases of alleged or proven scientific misconduct,
fraudulent publication or plagiarism the publisher,
in close collaboration with the Editors-in-Chief,
will take all appropriate measures to clarify the
situation and to amend the article in question. This includes the prompt publication of an erratum or, in the most severe cases, the complete retraction of the affected work.

In case of strong suspicion of fraudulent behavior concerning our journal's publications please contact us at our Editorial Office:
