ENDOPLASMIC RETICULUM STRESS IN DISEASES
The journal *Endoplasmic Reticulum Stress in Diseases* is devoted to the publication of research results on the impact of endoplasmic reticulum stress in the development and progression of relevant human pathological conditions. The journal also covers the development and utilization of therapeutics that exploit the same cellular response. It serves as a forum for all members of the research community working on different aspects of unfolded protein response and related diseases. The journal is peer-reviewed, appears in electronic-only format, and publishes on an ongoing basis.

Benefits for authors:
- Fast and thorough peer review ensured by a strong Editorial team
- Articles Processing Charge waived until 2015
- English language assistance provided for accepted manuscripts

**SCOPE**

*Endoplasmic Reticulum Stress in Diseases* covers the involvement of endoplasmic reticulum stress in human diseases ranging from cancer and inflammation to neurodegeneration and metabolic diseases such as diabetes. Both *in vitro* and *in vivo* studies are considered, and relevant therapeutic development and evaluation are welcome.

Accepted forms of contributions:
- Research Articles
- Communications and Rapid Communications
- Reviews and Mini-Reviews
- Commentaries
- Letters to the Editor and Amendments
