Introduction 1
What Philosophy of Mathematics Is Today 1
What Else Philosophy of Mathematics Can Be 3
A Vignette: Option Pricing and the Black-Scholes Formula 6
Outline of This Book 10

Chapter 1: Histories of Philosophies of Mathematics 13
History 1: On What There Is, Which Is a Tension between Natural Order and Conceptual Freedom 14
History 2: The Kantian Matrix, Which Grants Mathematics a Constitutive Intermediary Epistemological Position 22
History 3: Monster Barring, Monster Taming, and Living with Mathematical Monsters 28
History 4: Authority, or Who Gets to Decide What Mathematics Is About 33
The “Yes, Please!” Philosophy of Mathematics 37

Chapter 2: The New Entities of Abbacus and Renaissance Algebra 39
Abbacus and Renaissance Algebraists 39
The Emergence of the Sign of the Unknown 40
First Intermediary Reflection 45
The Arithmetic of Debited Values 46
Second Intermediary Reflection 51
Chapter 3: A Constraints-Based Philosophy of Mathematical Practice  59

Dismotivation  59
The Analytic A Posteriori  63
Consensus  67
Interpretation  72
Reality  81
Constraints  84
Relevance  90
Conclusion  97

Chapter 4: Two Case Studies of Semiosis in Mathematics  100

Ambiguous Variables in Generating Functions  101
  Between Formal Interpretations  101
  Models and Applications  107
  Openness to Interpretation  109

Gendered Signs in a Combinatorial Problem  112
  The Problem  112
  Gender Role Stereotypes and Mathematical Results  116
  Mathematical Language and Its Reality  120
  The Forking Paths of Mathematical Language  122

Chapter 5: Mathematics and Cognition  128

The Number Sense  129
Mathematical Metaphors  137
Some Challenges to the Theory of Mathematical Metaphors  142
  Best Fit for Whom?  143
  What Is a Conceptual Domain?  146
  In Which Direction Does the Theory Go?  150
  So How Should We Think about Mathematical Metaphors?  154
An Alternative Neural Picture  156
