All three authors want to thank the editors and reviewers at Columbia University Press for their excellent suggestions for improvement. Support for this book was provided by the Brook Byers Institute of Sustainable Systems, the School of Public Policy and several engineering and science programs at the Georgia Institute of Technology that funded a workshop held in Atlanta in July 2017 to discuss interdisciplinary aspects of the global energy transition. That workshop enabled us to advance our concepts of technical and societal transformations with an audience that was deeply engaged in developing technology solutions to clean energy and climate change challenges.
Empowering the Great Energy Transition
