Preface

This project has disparate origins, some that I can only appreciate as I come to the end of a long journey and ask, how did I end up here? The route seems so obvious as I look back. But it would be disingenuous to say that I knew all along where I was going and why.

In the 1980s, I was an eyewitness to the first wave of economic reforms in China after the Cultural Revolution. Deng Xiaoping and his supporters set out on a long march to smash the iron rice bowl and rewrite the terms of employment for hundreds of millions of Chinese. The so-called reformers sought, among other things, to dispense with lifetime guarantees of job security and greatly reduce state subsidies for housing, medical care, and other key pieces of the public safety net. At the university I was teaching at in the ancient city of Xian in northwest China, the authorities also struggled, with mixed success, to figure out how to build an incentive structure into university education so that the more “productive” professors and teachers would somehow be rewarded for their efforts.

These attempts to rewrite the terms of employment and to change people’s expectations about what they are entitled to by virtue of their employment had pervasive political and economic consequences at the local, provincial, and national level. I took a keen interest in these consequences during my two-year stay in China and subsequently. Return visits and newsy letters from friends and former students in China helped keep me apprised of how these macro-level political and economic developments affected everyday life in the People’s Republic.

When I returned to the United States, the country was beginning to dig itself out of the worst recession of the postwar years. Employed as a journalist and an editor over the next several years, I noticed that a quieter revolution was under way to rewrite the terms of employment and to reconfigure the social safety net in this country. Even though the economy was roaring once again by the mid-1980s, many workers in the United States were told to shoulder more of the costs of their health care, to make do
with part-time and temporary jobs, to accept smaller pensions, and to labor under the threat of being "downsized" at a moment's notice. Anger, anxiety, and insecurity characterized the work lives of many people I knew, including coworkers, friends, and family members, most of whom were told to make do with less. While political scientists focused on the efforts by the Reagan administration and its successors to roll back the public safety net, the private-sector safety net was quietly under siege.

Given all the hostility and insecurity I witnessed in the workplace and the enormous gains that corporations made as wages stagnated, I began to wonder why organized labor was not more successful in defending the porcelain rice bowl that labor, business, and the state had forged in the United States after World War II. The stock answer about how U.S. labor unions were politically enfeebled because of a dwindling membership base was unconvincing and seemed too circular an explanation. As the debate over health-care reform heated up in the early 1990s, I also wondered whether the optimism was justified among analysts and labor officials that business was prepared to be a constructive partner with labor and the state to resolve the pressing problems of escalating health-care costs and the growing number of the uninsured. Furthermore, I was perplexed by organized labor's decision to stick by a private-sector solution for health-care reform. Labor remained committed to an employer-mandate solution even though the bond between employer and employee was disintegrating in the United States, so much so that the very definition of what constitutes an employee was up for grabs.

For these reasons, I decided to use health-care reform as a window to explore larger questions related to the politics of economic restructuring in the United States. This book addresses several important but largely neglected areas in the field of American politics and public policy, including: the private face of the U.S. welfare state; labor's continued, evolving, and multifarious role in shaping contemporary social policy; the ways in which health-care reform is inextricably bound up with larger questions related to the U.S. political economy; and the likelihood that a durable rather than a sporadic coalition of organized labor and other groups will congeal to challenge the rightward thrust in social and economic policy in the United States.

I have accumulated a number of personal and intellectual debts along the way. I am beholden to David Mayhew, Stephen Skowronek, and Rogers Smith of Yale for their thoughtful, constructive criticism at each step of this project and for letting me write the dissertation I wanted to write. David Cameron's critical eye, optimism, and frank and levelheaded advice were invaluable from start to finish. One could not ask for more in a dissertation committee chairman. I am grateful to Walter LaFeber for initially
showing me how much history has to teach us about contemporary politics and for his ongoing support and encouragement long after I was his student at Cornell.

Cathy Cohen, Daniel Cornfield, William Foltz, Victoria Hattam, Elise Jaffe, David Montgomery, Sherle Schwenninger, Kathy Thelen, and my classmates in the 1994–95 prospectus seminar at Yale University helped me define and refine the project at a time when it was just a glimmer in my eye. Alan Draper, Ted Liazos, Charles Lindblom, Mark Peterson, Ted Marmor, and Adolph Reed interceded at key junctures and helped move the project along. Cathie Jo Martin deserves special thanks for her active involvement in the evolution of this project over the years.

I am particularly indebted to James Morone and the other anonymous reviewers of the book manuscript. Their insightful, engaged, and constructive criticisms were invaluable.

Yale University generously bankrolled my initial studies and research. My new home at the University of Pennsylvania has provided critical research support and a congenial and stimulating environment. I have been blessed with talented and attentive research assistants at Penn. I especially thank Allan Alicuben and Joanne Lee for their help. Eric Lomazoff’s persistence and formidable research skills helped immeasurably to make the completion of this project a smooth one.

I am much obliged to the dozens of representatives of labor, business, and public-interest groups who found time in their busy schedules to have a thoughtful conversation with me about health care and related issues. I want to thank in particular Robert McGarrah of AFSCME for letting me examine his personal files on health-care reform, and Keir Jorgensen of UNITE for granting permission to use the ACTWU archives at Cornell University.

My research was facilitated (and made much more enjoyable) by many talented and dedicated librarians and archivists. I especially thank Richard Horn, Bernard Roger, and Jeannie Solensky of Yale University’s Social Science Library, Stuart M. Basefsky at the Industrial and Labor Relations Library at Cornell University, Hope Nisly at the Labor-Management Documentation Center at Cornell University, Mike Smith and Walter Gulley at the Walter P. Reuther Library at Wayne State University, Lee Sayrs at the George Meany Memorial Archives, and Marjorie G. McNinch at the Hagley Museum and Library.

Frances Benson of Cornell University Press shepherded the project along with good cheer and sound advice. I am grateful to Robin Anderson and Melissa Nelson for deftly guiding the copyediting of the book.

Members of my family are still not clear what this project is all about, but I am beholden to them all the same. The discussions and debates I have had with them at holiday gatherings over the years and the struggles they have faced in the workplace had a deep effect on my choice of subjects and on the final shape of this project. Thanks to them, my interest in political science continued to develop in tandem with my interest in real world concerns. Finally, my love and thanks to Atul for everything—and then some.
