I have benefited from the advice and assistance of many people in the writing of this book. While I was a graduate student in Princeton University's Program in the History of Science, my adviser, Michael Mahoney, applied his sharp critical abilities to earlier formulations of ideas appearing here. Every member of the program's faculty, however, contributed through encouragement, example, and apparently genuine interest. Anthony Grafton acted as a valuable guide in my first explorations of the arcane intellectual world of the sixteenth and early seventeenth centuries. Versions of some chapters were read and commented upon by Hans Aarsleff, Edith Sylla, and the late Charles Schmitt, whose help and encouragement, during both my time at Princeton and my year at Imperial College, London, are particularly remembered.

Simon Schaffer read the original draft, and I trust he will forgive my disregard of his suggestion that I go further into Mersenne's controversy with Fludd. He was a continual source of stimulation while I worked on the book at Cambridge and indirectly influenced its final form to a considerable degree. Nicholas Jardine also provided a model of thoughtful and profound scholarship, and his approval of my efforts counted for a great deal.

On a more material level, I am indebted to John Elliott for taking me on as his research assistant at the Institute for Advanced Study during 1983–84, and to the Master and Fellows of Gonville and Caius College, Cambridge, who elected me to a Research Fellowship which allowed uninterrupted work on the book.

Chapters 2 and 3 are descended from, and supersede, an article, "Marin Mersenne and the Probabilistic Roots of 'Mitigated Scep-

I wish to thank L. Pearce Williams for inviting me to contribute to the Cornell History of Science Series and for his comments and suggestions, and Cornell University Press for finding readers who challenged and stimulated my efforts in an exemplary way. The Press did not provide my best reader, however; that honor (though she may not agree with the description) belongs to my wife, Pauline. Not only did she reassure me when I had doubts, but she also performed the equally—I cannot honestly say "more"—important task of telling me when I'd written nonsense. This book is dedicated to her, because she deserves it, and may be pressed into service again.
