Tables and Figures

Tables

2.1. Percent rating selected issues as a “very important” threat, 2006
2.2. Percent who agree that “the best way to ensure peace is through military strength,” by ideology and gender, 2004–5
2.3. Responses to the statement: “Under some conditions war is necessary to obtain justice,” June–October 2013
2.4. Percent who agree that “when vital interests of our country are involved, it is justified to bypass the UN,” 2003–5
2.5. Support for sharing the burden of NATO military action, 2008
2.6. Percent who agree/disagree that country should abide by an EU decision to use military force, 2006–7
3.1. Average national gender difference in net support for defense spending, 2002–13
3.2. Regression analysis of support for defense spending, 2003 and 2013
3.3. Gender difference in percent who favor the European Union becoming a superpower “even if this implies greater military expenditures,” 2003–5
4.1. Opinions of torture in response to variously worded questions
4.2. Support for torture by party and gender
4.3. Regression analysis of support for torture and presidential approval
TABLES AND FIGURES

5.1. Support for using force and gender difference in twenty-seven historical episodes 83
5.2. Support for using military force for specific types of military action 86
5.3. Average gender difference by principal policy objective 88
5.4. The effect of mentioning casualties on support for using force 89
5.5. Gender difference during wars in Iraq and Afghanistan 90
5.6. Gender difference and multilateral participation in military actions 92
5.7. Regression analysis of support for using military force and resulting gender difference 93
6.1. Support for the use of force and gender difference in hypothetical circumstances 101
6.2. Comparison of support for using force and gender difference in two hypothetical situations 102
6.3. Gender difference in support for troops in Afghanistan 104
6.4. Support for sending arms and military supplies to antigovernment groups in Syria 110
6.5. Percent approving air strikes or ground troops if negotiations on Iranian nuclear program fail, 2012 114
7.1. List of historical episodes, number of survey questions, and number of states surveyed 118
7.2. Support for using force and gender difference for specific types of military actions 125
7.3. Support for using force and gender difference by principal policy objective (PPO) 126
7.4. Support for using military force and gender difference according to which multilateral actor is mentioned in the survey question 127
7.5. Support for using military force and gender difference by national characteristics 130
7.6. Regression analysis of support among men and women for using military force and resulting gender difference 132
A1. List of sources for data shown in Table 4.1 155
A2. List of states included in the data collection on comparative support for using military force (chapter 7) 157

Figures

2.1. Gender difference in attitudes toward global involvement, 2002–5 28
2.2. Gender difference in views of war, June–October 2013 35
2.3. The relationship between the political empowerment of women and the size of the gender difference on “war is necessary” 37
3.1. Net support for defense spending and gender difference in the US, 1965–2013 49
3.2. Net support for defense spending and gender difference, 2002–13 53
4.1. Number of mentions of Abu Ghraib in New York Times and TV news 64
4.2. Percentage of respondents who say torture is “frequently or sometimes justified,” by gender and party identification 70
4.3. Combined marginal effects of partisanship and gender on support for torture 76
5.1. Average absolute gender difference by half decades 85
6.1. Gender difference in support for US drone strikes 107
7.1. Support of women and men for using military force in ten historical episodes 123
7.2. Gender difference in support for using force according to which military forces are mentioned in the question 128
